

Subject: Pollution in Delhi (capital city of India) – a solution centric submission

Respected fellow citizens of India

CC: With a request to appreciate the concern and do all the deemed in this regard:

1. The Excellence Ms. Draupadi Murmu, President of India,
2. The excellence Shri C. P. Radhakrishnan, Vice President of India
3. Honourable Mr Narendra Modi, the Prime minister of India,
4. Honourable Shri Om Birla, Speaker of the Lok–Sabha
5. Honourable Shri Amit Shah, Minister of Home affair,
6. Honourable Mr S. Jaishankar, Minister of external affairs
7. Honourable Shri Suman Bery, Vice Chairperson of NITI Aayog,
8. Federation of Indian Chambers of Commerce and Industry (FICCI):
9. Confederation of Indian Industry (CII)
10. Associated Chambers of Commerce and Industry of India (ASSOCHAM)

Respected fellow citizens of India

Following is submitted on the subject, submission consists of **(A)**. Broad outline, **(B)**. Concluding submission,

(A). Broad outline

Following is submitted:

A.1). Had my son or Daughter being at the helm of affair in India (like Prime minister) myself would have asked them to do all the requisite work (conceptualizing, planning, documenting, disseminating it to the masses, discussing and the implementing alongwith mechanism for feedback and correction) needed to sort out this menace of severe

pollution in Delhi and other places of India without any fear or fervor or noise and that to without attaching any extra motive in the situation (i.e. searching opportunity in this emergency – आपदा में अवसर) like issuing ill-conceived, half cooked and unsustainable order of switching to Odd and Even formula (i.e. indirectly promoting sale of vehicles) or order of discarding ten year old Diesel vehicle and fifteen year old petrol vehicles or promotion of battery operated Vehicles (EV) or going with the advice of so called scientific community suggesting graded response system and artificial rain or even using 24×7 sprinklers near the pollution data monitoring station to misrepresent the data and befool the self and public rather concentrating on what is the need of the country and its citizen, on how to contain explosion of Population and vehicles, and on searching/finding the optimums of population, vehicles, houses, forest and tree cover and all that is needed to ensure all kind of cleanliness and hygiene (land, air, and water, physical, mental, and religious/spiritual).

Had my Son/daughter being at the helm of affair in India (like Prime minister) than this letter would not have required but since they are hence myself left with no other option to submit it to the common people of India who makes or breaks the government and through them to the officiating prime minister (and other dignitaries including her excellency the president of India) to do the following which are submitted below with proper reasoning, logic and roadmap:

***[Note:** Solution centric details submitted below can say to be applicable to all the countries which are facing similar problem as that of India and as such President/Prime ministers of those countries are also requested to consider the submission and help solve the problem their citizens are facing.]*

1. Surround PMO, NITI Aayog, all ministries, government undertakings, Public sectors, all government entities/Organisations with the individual

consultant who appreciates “Bhartiya concept of Dharma, Artha (economy), kaam (work), Rajniti (Politics), Rajya (Country and governance), and Moksha (Freedom)” and/or a consultancy firm whose majority of board of director appreciates the same in place of current status wherein all the above places are filled with consultancy firm having foreign origin and multinational status whose vision, mission and value are guided solely by the angle of profit irrespective of its final outcome whether it is good, bad or ugly brings healthiness and happiness or more confusion and chaos.

Currently multinational consultancy firms namely: Grant Thornton, McKinsey, Boston Consulting Group (BCG), and Bain & Company, Deloitte, PwC, EY, and KPMG are operating in India and offering their services mainly to the government of India which includes PMO and NITI Aayog as well (one can check the exact details like type of services they offer to Indian government, revenue they generate etc. in the consulting firms websites through Google).

Consultants and their domain at a glance which currently associated with government of India:

(i). Grant Thornton Bharat: Their Public Sector Advisory team works on public policy, project management, data analytics, PPP advisory, monitoring & evaluation, etc. They have been involved in large government programs: e.g., Clean Ganga mission, urban development, and skill

development. https://www.grantthornton.in/en/services/consulting/public-sector-advisory/?utm_source=chatgpt.com,

(ii). KPMG India: They have a dedicated “Government & Public Services” practice. [Their offerings include strategy & policy advisory, program management, PPP advisory, infrastructure consulting].

(iii). McKinsey & Company, India: [They are frequently hired by government agencies. For instance, NITI Aayog has engaged McKinsey for time-bound advisory tasks. They also advise on digital infrastructure reform, including with the Ministry of Electronics & IT.]

(iv). Boston Consulting Group (BCG): [BCG is also involved in public-sector consulting, especially for digital reforms. They work on innovation, transformation, and strategy in government contexts.]

(v). PricewaterhouseCoopers (PwC) India: PwC is one of the Big Four consultants with strong government advisory work. According to RTI-based reporting, PwC has won many government assignments. They are listed in government-approved consulting firms for e-governance projects.

(vi). Deloitte India: [Deloitte (India) is included in the list of Tier-I consultants for government / e-governance in official government vendor lists. They have a Government & Public Policy consulting practice.]

(vii). Ernst & Young (EY) India: [EY is often hired by government bodies. For example, NITI Aayog has used EY for various projects. Their consulting services cover risk, technology, operations, and public-sector strategy.]

Viewing at the number of foreign consultants engaged [by NITI (National institute for transforming India) Aayog, PMO, different ministries and other government entities] their ever increasing business turnover from India, it can safely be said that the entire think tank, entire bureaucracy, and entire political class (in power or in opposition) of the country collectively have failed to deliver a healthy and happy life to the citizen of India and its genuine guests.

On the other hand Saints and Sages who are supposed to do this job (of giving consultancy to the government and guiding the classes as well as the masses, found to be busy in either parroting the sermons from old testament or holy scriptures or conducting Bhagwat katha to the unconcerned people who are hardly related with any policy decisions and thus found to be involved in creating environment of frustration, hopelessness and helplessness in the country. [Bhagwat Katha was first recited to the King Parikshit by Sukhdev (son of Veda-Vyas) in seven days

so that he can take his heavenly abode without any pain, anguish, miseries, guilt and ego, on his way to heavenly abode and is considered death centered and has to be avoided to be conducted as a celebration). Further to it, the scientific community found to be busy in suggesting graded response, artificial rain and newer medication to combat the pollution and get cured from its ill effect whereas the business community is found to be busy in promoting their brand of air purifiers at home and in hotels and hospitals.

A.1.1). Surprise begins when even with the above ground reality (in policies) Prime minister of India and leading businessman Mr. Mukesh Ambani and Mr. Gautam Adani talks of Atma-nirbhar Bharat (self-reliant Bharat/India) and give following statement on self-reliance:

i). Statement of Honourable Prime minister of India (15.08.2025):

“Dependence on others raises questions about a nation’s independence. It is unfortunate when dependence becomes a habit, a dangerous one. That’s why we must remain aware and committed to becoming self-reliant. Self-reliance is not just about exports, imports, the rupee, or the dollar. It is about our capabilities, our strength to stand on our own.”

The PM reminded citizens that India’s strength lies in its people, innovation, and commitment to self-reliance, urging every Indian to contribute to nation-building, whether by buying India-made products or participating in scientific, technological, and entrepreneurial ventures to ensure a prosperous, powerful, and developed Bharat-India.”

ii). Statement of Mr. Mukesh Ambani-CMD RIL (dated 29.08.2025, AGM of RIL)

It has been my privilege to serve your company since its inception and to attend every single AGM of Reliance for the past 48 years. This has given me the opportunity to watch and participate in every phase of Reliance's evolution.

I have also witnessed India's incredible journey in these five decades from a third world country to one now on the threshold of becoming a first world power. The most important lesson this journey has taught us is that there is no substitute for economic strength.

This lesson is reinforced by recent geopolitical developments. India must gain greater economic strength and do so with a sense of urgency. Our Prime Minister Shri Narendra Modi ji rightly exhorted us in his Independence Day speech that the yardstick of **atma-saman** (self-respect) is **atma-nirbhar bharta** (self-reliant India). India must become self-reliant to the maximum extent in key technologies, critical industries and other vital sectors of the global economy. Throughout our history, Reliance has contributed to this mission of building a **Balwan Bharat** (strong India).

I assure our respected prime minister that Reliance will follow his command with redoubled efforts. However, the magnitude of the challenge is so large that all Indian businesses must work together with unity as a grand coalition in the spirit of cooperation, mutual learning and mutual support. I had made this suggestion in last year's AGM and I will repeat it today. There is strength in unity and collective endeavor and this is what the nation today expects from its business community.

Despite geopolitical uncertainty, one truth is clear that India is on the rise, Ambani observed. "India is on the rise, and India's rise is unstoppable today, India already ranks among the world's top four global economies under the determined leadership of Modi," he said. "More importantly, India need not have any modern model; we have the ability and the responsibility to create an India first model of development. This model will use to bring prosperity and security to India, improve the quality of life of each and every Indian, and protect the environment," the RIL chief said.

Ambani said that this model will also harmonize technology with democracy, economy with culture, spirituality with science, and national aspirations with friendship across all nations. "This is the collective dream of nearly 1.5 billion Indians to build a nation that leads to the world, prosperity and compassion," Ambani said.

iii). Statement of Mr. Gautam Adani (Adani group): Adani Group chairman, Mr. Gautam Adani at IIT Kharagpur's on Aug 19, 2025, "The world was moving from conventional wars to technology-driven wars of power, and our ability to prepare would decide our future. The wars today are fought in server farms, the weapons are algorithms and empires are built in data centres. The armies are botnets," Adani said. Pointing out that 90% of the country's semiconductors were imported and that one disruption or sanction could freeze our digital economy, Adani said, "We import 85% of our oil. A geopolitical incident can restrict our growth. When our data crosses India's borders, every bit of it becomes raw material for foreign algorithms, creating foreign wealth. Many of our military critical systems are imported, binding national security to political will. We must fight for the freedom of self-reliance," Adani said."

Mr. Gautam Adani at IIM Lucknow on 7 Aug 2025, said that "The future belongs to those who maximise possibility, and maximizing possibility means stepping into an unknown territory," he said. Mr Adani advised the students to trust their instincts when "data runs dry". "That is how the future is saved, not through corporations but through courage," he said. He also said that it was the "bold path – the one filled with risk and resistance – that shapes leaders the world remembers".

(A.1.2). Note on the views of the Prime minister of India, Chairman RIL and Chairman Adani group: It is quite natural that every Indian will admire such a sentiment of positivity toward their country becoming self-reliant and as such we do also admire the same, however In the

circumstance wherein entire Indian government appeared to be guided by the multinational firms (which do not appears to be keeping basic tenets of Dharma as their founding principle) and wherein almost all the Saints, sadhus and fakir are found to be diverted toward lesser needed ritualistic discourses, we thought it proper of requesting directly to the **people of India (including NRI's), and requesting them to approach the** large and mid-level business entities of India, or the firm whose majority of board of director can appreciate “Bhartiya concept of Dharma, Artha (economy), kaam (work), Rajniti (Politics), Rajya (Country and governance), and Moksha (Freedom)” to ‘venture into the necessary national and international consultancy work’ and took part in building the nation and guide the world.

This is (consultancy firms whose majority of board of directors understand basic tenets of Dharma and appreciate Bhartiya concept of Dharma, Artha (economy), kaam (work), Rajniti (Politics), Rajya (Country and governance), and Moksha (Freedom)”) required because it is where from the shift begins. Currently what is happening is people need Aata (wheat flour – food grains) but the government is talking of providing cheap Data (for mobile) and is devoting its time and energy on the creation of framework for Data centres and its support services– an unfortunate act.

Amongst the wise ones of old it is a broader agreement that for the best results ratio of Indian to foreign consultants firms (and number of individuals in such firms) has to be approximately seventy five percent (75%) to twenty five percent (25%) which have to have the blessing. Of the Saints, Sadhu, Fakir, Shankracharya's and Seers, but not the Pandit's, Maulvi, Padri's, etc.) in all the policy decisions of the country. It can be said that simply by doing above every problem India is facing will largely be solved and India will be able to stand its own– living healthy, happily and guiding and cooperating with other countries of the world.

A.2). When one type in the Google: “What can be the probable solution to the severe Pollution which Delhi is facing”, it quickly answers as below:

Answer by Google (AI): Solving Delhi's severe air pollution requires a multi-faceted approach combining immediate emergency actions, long-term policy changes, and civic participation, targeting major sources such as **vehicular emissions, industrial pollution, dust, and agricultural burning.**

A.2.1). Short-Term and Emergency Measures

Immediate actions are generally implemented via the Graded Response Action Plan (GRAP) during peak pollution periods.

I. **Vehicular Restrictions:** Implementing odd-even schemes for private cars, banning the entry of non-essential trucks and older diesel vehicles (BS-III and BS-IV) into Delhi.

II. **Halt Construction:** Suspending all non-essential construction and demolition (C&D) activities to control dust, with strict enforcement of dust control measures at allowed sites.

III. **Waste Burning Ban:** Strictly prohibiting the burning of municipal solid waste, leaves, and biomass, with night patrolling to enforce the ban.

IV. **Water Sprinkling/Anti-Smog Guns:** Deploying water sprinklers and anti-smog guns, especially in high-traffic and construction zones, to suppress dust.

V. **School Closures/Work From Home:** Temporarily closing schools or shifting to online learning, and issuing work-from-home directives for government and private offices to reduce commuting.

VI. **Artificial Rain:** Exploring and piloting technological interventions like cloud seeding to induce artificial rain and wash away pollutants, although effectiveness is debated and weather dependent.

A.2.2). Short-Term and Emergency Measures Long-Term Policy and Infrastructure Solutions

Sustainable improvement relies on systemic changes addressing root causes.

- I. **Improve Public Transport:** Augmenting the public transportation system with more buses and metro frequency, improving last-mile connectivity, and regulating auto-rickshaw fares to disincentivize private vehicle use.
- II. **Promote Electric Mobility:** Shifting public and commercial transport to electric vehicles (EVs) or CNG, offering subsidies and incentives for EV purchases, and developing charging infrastructure.
- III. **Industrial Transition:** Relocating polluting industries from residential areas, forcing all industries to use cleaner fuels like PNG (Piped Natural Gas) or biomass, and converting brick kilns to less polluting "zig-zag" technology.
- IV. **Stubble Burning Alternatives:** Providing subsidies and machinery (like Happy Seeders) to farmers in neighboring states to manage crop residue without burning, and developing a supply chain for using the residue for energy production or composting.
- V. **Waste Management:** Ensuring net-zero waste to landfill through comprehensive waste segregation, door-to-door collection, and waste-to-energy initiatives to eliminate open burning.
- VI. **Urban Greening:** Substantially increasing green cover by planting more trees and developing green belts to naturally filter the air.

A.2.3). Short-Term and Emergency Measures Individual and Community Actions

Citizen involvement and awareness are crucial for success.

- I. **Reduce Vehicle Use:** Opt for public transport, carpool, walk, or cycle whenever possible.

- II. **Conserve Energy:** Use energy-efficient appliances and turn off lights and electronics when not in use to reduce demand on power plants.
- III. **Avoid Burning:** Do not burn garbage, leaves, or wood for heating.
- IV. **Protect Yourself:** Wear high-quality masks (e.g., N99) when outdoors on high pollution days and use indoor air purifiers if possible.
- V. **Report Violations:** Use government apps, like the Green Delhi app, to report pollution sources like waste burning or construction violations

A.2.4). Note on the views of Google (AI): Following is submitted

A.2.4.i). In the name of offering solutions in this situation of severe pollution in cities like Delhi, a game of (billion dollar) few lakhs of crore rupees begins which though brings no positive results but enriches few multinational companies and draining the common people of India (or whichever countries these solutions are applied into) for example “Implementing odd-even schemes for private cars found to be increase the sale of private car whereas banning the entry of non-essential trucks and older diesel vehicles (BS-III and BS-IV) of ten year or more and petrol vehicle of fifteen year and more had caused anguish and pain to the owner of such vehicle and government of Delhi has already submitted to have withdrawn this rule after sufficient argument in the supreme court of India.

A.2.4.ii). We tried to find out the solutions of the above and it can be said that with the blessings of elders and well-wishers of countless that we become able to offer solution (and document them) to not only above problem but a large number of problem arising in the ‘social-economical-Dharmic (religious) and Rajnetic (political) arena and can be

assessed easily from the freely downloadable following books (books are not placed in the open market) from the website: resurrectionofdharma.com. Apart from books on agenda, a few open letters and links of the interviews and podcasts are also given in the website.

Books are

1. Mita lifestyle agenda (book contains 102 topics on socio- economic- religious – political agenda for the society, country and the world),
2. Dharyate iti Dharma (revisit of Tao Te Ching by Lao Tzu),
3. Divincracy (Divine Democracy) – revisit of Hind Swaraj by M.K. Gandhi –
4. Global Order in the Eyes of India ("भारत की नजर में वैश्विक व्यवस्था' –जीवंत एवं कारगर वैश्विक व्यवस्था के लिए विवेचनात्मक दृष्टि प्रपत्र),
5. Kaam ki Baat – On water, land and forest (काम की बात –जल, जमीन, जंगल पर (शुद्ध हवा, शुद्ध जल, सफाई से जुड़ी हुई विसंगतियों, समस्याओं एवं सम्भावित समाधानों पर लिखे खुले पत्रों (वासठ पोस्ट कार्डों) का संग्रह),
6. Alternate economy – Natural systematic economy, – 2023, in English only soft copy,
7. Something on religion and related issues–need for its assimilation (What, Why and how of assimilation of religion and restructuring of economics, Judiciary and administration, and its urgency),

A.3). undersigned currently staying in New Rajinder Nagar, New delhi- 110060, India, which is stone throw away from the Delhi's only reserved forest of 3100 acres does not feel any trouble in breathing even when news are pouring from across the city of nothing except that of pollution in Delhi, SMOG (smoke + fog) in Delhi.

In such a bizarre situation wherein most of the people in and around Delhi suffers of SMOG except that of people live in the vicinity of Delhi's only reserved forest of 3100 acres it can easily be concluded that the difference is only of the forest and tree cover, which inter-alia suggest

that we should plant more and more tree and have large forest cover spread across the country. .

:

A.3.1).Without entering into much of the history, any blame game, causes and conspiracies, it is submitted that the forest and tree cover which used to be 59% (fifty nine percent) before the enactment 1860 forest law by Britishers found to be approximately 33% (thirty three percent) when Britishers left India in 1947. This area of 33% was reduced to 19% (nineteen percent) after the green revolution (during green revolution in place of planting more trees forest was cut to pave the way to the farmers in the name of ensuring food security to exponentially increasing population) which currently has gone up to 21% by one set of information and gone down to 14% (forest and tree cover of India is just fourteen percent) by another set of data and information.

Looking at the above mentioned dire situation of pollution and forests and tree cover in India following submission is made so that the forest and tree cover can be made up to its optimum level of 37% (thirty seven percent) forest and tree cover is said to be optimum as per the scriptures which is equated forest and tree cover to that of hair and capillus in the humans (Man/woman).

A.3.1.1).Submission:

i). India has recently issued (on November 19, 2025) 21st installment of the PM-KISAN scheme to over 9 crore farmers, which indicates that there exists nine crore farmers, records of which are available with the government. My submission to the government of India is that that we can entrust these nine crore farmers with the afforestation scheme wherein every of these nine crore farmers will plant 100 trees (hundred tree) in their agriculture land and raise it for two years after which they can sell it to government for which each farmer will receive plantation

cum maintenance allowance of rupees one per tree per day (that is each farmer will receive 73000 thousand after handling over two year old hundred plants and planting them to site suggested by local member of parliament. Further to implement this scheme an advance amount of rupees ten thousand to each of the farmer (as a seeding amount) can be issued and after every six month and uploading of the photograph of plants (on the site of Forest and environment ministry, or agriculture ministry) installments of rupees ten thousand can be issued and a full final payment can be issued after the relocation of the plant at the suggested site by the local member of parliament. It is submitted that the entire scheme must be handled by the government of India through its elected member of parliament in Loksabha. It is also submitted that the government can fine tune the scheme and announce its implementation at an earliest convenience.

ii). Further, there exists more or less a complete list of do's and don'ts in the agenda in the form of books mentioned above and are placed for free access at the website: resurrectionofdharma.com and all the concerned are requested to go through the same and collaborate in manifestation of the same.

B). Concluding submission

The time has come for a governance renaissance — a transition from the insecurities, instability of imported systems to the confidence of self-rooted order as per the basic tenets of dharma which will help establish a stable, legitimate, and visionary governance framework capable of guiding India to restore its glory and guide the world at large.

At this juncture, undersigned wishes to submit that this letter is being submitted on the instructions of quite a few respected Saints, Sadhu, Sadhvi, so as to restore the glory of our civilisation from the abode of

Himalaya to the plains of India and up to the Indian Ocean and beyond,
so that we all lead a healthy, happy and holy life.

Above is submitted,
May god bless India,

Yours Sincerely

Narendra Agarwal

For the Resurrection of Dharma,
